abstract constraints are an important enabling technology for interactive graphics applications however today s constraint based systems are plagued by

several limitations and constraints have yet to live up to their potential junos 2 is a constraint based double view drawing editor that addresses some of these limitations constraints in junos 2 are declarative and they can include non linear functions and ordered pairs moreover the junos 2 solver is not limited to acyclic constraint systems junos 2 also includes a powerful extension language that allows users to define new constraints the system demonstrates that fast constraint solving is possible with a highly extensible fully declarative constraint language the report describes what it is like to use junos 2 outlines the methods that junos 2 uses to solve constraints and discusses its performance

the core technologies underlying software configuration management have changed little in more than two decades development organizations struggle to manage ever larger software systems with tools that were never designed to handle them their development processes are warped by the inadequacies of their building and version management tools developers must take time from writing and debugging code to cope with the operational problems thrust upon them by their build systems inadequate support of large scale concurrent development vesta a novel system for large scale software configuration management offers a better solution through a unique integration of building and version management facilities vesta constructs software of any size repeatably incrementally and consistently since modern software development occurs worldwide vesta supports concurrent multi site distributed development vesta's core facilities are methodologically neutral allowing development organizations a wide range of flexibility in the way they arrange their code repositories and structure the building of system components in short vesta advances the state of the art in configuration management
