how the hidden trade in our sensitive medical information became a multibillion dollar business but has done little to improve our health care outcomes hidden to consumers patient medical data has become a multibillion dollar worldwide trade industry between our health care providers drug companies and a complex web of middlemen this great medical data bazaar sells copies of the prescription you recently filled your hospital records insurance claims blood test results and more stripped of your name but possibly with identifiers such as year of birth gender and doctor as computing grows ever more sophisticated patient dossiers become increasingly vulnerable to reidentification and the possibility of being targeted by identity thieves or hackers paradoxically comprehensive electronic files for patient treatment the reason medical data exists in the first place remain an elusive goal even today patients or their doctors rarely have easy access to comprehensive records that could improve care in the evolution of medical data the instinct for profit has outstripped patient needs this book tells the human behind the scenes story of how such a system evolved internationally it begins with new york advertising man ludwig wolfgang frohlich who founded ims health the world's dominant health data miner in the 1950s ims health now gathers patient medical data from more than 45 billion

transactions annually from 780 000 data feeds in more than 100 countries our bodies our data uncovers some of frohlich s hidden past and follows the story of what happened in the following decades this is both a story about medicine and medical practice and about big business and maximizing profits and the places these meet places most patients would like to believe are off limits our bodies our data seeks to spark debate on how we can best balance the promise big data offers to advance medicine and improve lives while preserving the rights and interests of every patient we the public deserve a say in this discussion after all it s our data

this article is principally concerned with a subset of electronic health records known as personal health records in contrast to the more familiar charts paper records and electronic medical records maintained by health care providers personal health records are medical records created and maintained by patients a personal health records model is superficially attractive because it seems to lack the misaligned incentives network effects and other market failure problems associated with the financing of a national inter operative ehr model while the model s patient centricity purportedly avoids the privacy confidentiality security externalities inherent in electronic health records the principal thrust of this article is that personal health records are dangerously flawed adjuncts to or substitutes for provider centric records and while lacking many of the touted quality or cost reduction benefits of oft criticized electronic health records they pose substantially higher levels of risk regarding security privacy and confidentiality the conclusion is that as with their technically more complex electronic health records sibling personal health records require a fundamental re working of the legal model applicable to all electronic health records
